

blueSmart Active

Active key for the blueSmart system.

Winkhaus expands the blueSmart access management programme with the blueSmart Active key, a particularly efficient component. The active electronic key has a variety of functions. For instance, it actuates passive cylinders which do not have any power supply. This key can also be used as a programming device and serve as a power adapter.

Winkhaus Plus

- + Opens passive and active cylinders
- + Programming device in pocket-size format
- + Emergency power supply for active cylinders
- + Enables the use of both active and passive cylinders, as well as active and passive keys in a single system
- + Exceeds previous limitations of electronic locking systems

blueSmart Active

Active key for the blueSmart system.

- With its own controller, its own clock, its own power supply, button and LED
- For operation of active and/or passive cylinders¹ which, for instance are used in extreme weather conditions
- As a supplemental product for new or existing¹ blueSmart systems:
 - As a power adapter
 - As a small programming device²
 - As a key with significantly enhanced blueSmart functions, particularly with the use of virtual networking.
- Up to 65,000 individual authorisations for doors¹
- Use of two individual time profiles in 15 minute grids on the key¹
- Large storage capacity
- With use as a “normal” key (without pressing the button)
 - Storage of the last 500 internal locking events with date and time
 - Transfer of up to 40 commands in the virtual network
- With use in programming mode^{1,2} (by pressing the button)
 - Reading of up to 8,000 locking events from the cylinder lists
 - Transfer of up to 4000 programming commands to up to 200 cylinders in the virtual network
 - Programming of up to 126 time profiles, including holiday tables
- Up to 30,000 cycles or 4 years in standby
- Easy battery replacement
- Batteries included

¹ Firmware update of the door components may be required

² Not possible with double knob cylinder bS6x
