

Cool in every situation.

The most flexible Winkhaus locking system ever.

blueSmart Active

blueSmart Active is the combination of active and passive keys and cylinders in a single extraordinary system.

With its larger format, the new blueSmart Active key offers more room for internal energy supply and contains a controller for the implementation of changes in rights. Wherever components and outdoor installations are exposed to extreme weather conditions or are used infrequently, limitations of active cylinders with an internal power supply are overcome. The innovative blueSmart Active key can open and close passive cylinders, serve as a convenient programming device or bypass the deteriorating batteries of an active cylinder – entirely new functions opening flexible possibilities for you.

blueSmart Active: passive and active keys and cylinders in one system!

- + New high-performance active electronic key
- + Also operates cylinders without any powersupply
- + Versatile programming and storage functions
- + Ideal for all exposed components or systems that are subjected to extreme weather conditions (e.g. power boxes, external maintenance or control boxes, utility cabinets, etc.)
- + No protruding knobs or additional battery compartments thanks to the integration of the battery in the electronic key
- + Also supports cylinders with low or empty battery
- + Combines the benefits of active and passive locking components
