

keyTec ZRV/ZRV6

Two locking rows on a single key

One locking system - two locking codes.

keyTec ZRV/ZRV6 features an additional locking row on the key. Two distinct key insert positions in the cylinder core provide an added level of locking security, whereby the locking code is scanned at up to 12 positions. Full variability and convenience is created by an A + B locking code, which means that even larger projects can be implemented comprehensively.

- 1 Increased security through up to 10 spherical holes combined with radial pins in the cylinder
- 2 High stability due to reinforcement on the key spine
- 3 Pioneering design thanks to ergonomic key head
- 4 Even less wear due to optimised key tip
- 5 Improved functionality by way of the dual locking code with up to 12 checking positions on the key
- 6 Compatible with modern security fittings thanks to a long shoulder of key

Technical features

- + Reliable 5 pin (ZRV) and 6 pin (ZRV6) locking technology
- + Up to 10 laterally checked radial pins
- + Double locking code thanks to A+B locking codes
- + Multiple paracentric key profile
- + Lock picking protection
- + Anti-drilling and anti-pulling protection (optional)
- + Anti-drilling and anti-pulling protection variants in accordance with VdS/SKG/DIN/EN
- + Can be combined with access control systems and blueSmart electronic locking systems thanks to an integrated additional transponder
