

blueControl Start Virtual

Data sheet for administration software

blueControl Start Virtual offers users a favourably-priced starter package to administer locking systems of up to a hundred cylinders and six upload readers in buildings to which a maximum of three hundred employees have access.

The performance range can optionally be extended to 350 cylinders and 700 employees. In addition, it is possible to transfer locking events to the upload reader via the keys.

As in small or medium-sized buildings the administration of the locking systems often cannot be efficiently attended to in full time, we have attached great importance to an easy handling when the software was developed.

On the back you can find a short introduction to the function and performance of blueControl Start Virtual.

System requirements

- + At least Pentium IV, 2.0 GHz, 2 GB RAM
- + At least 2 GB available hard disc space
- + Windows 7,8 and 10
- + 1 x USB (2.0 / 3.0)
- + blueSmart locking system

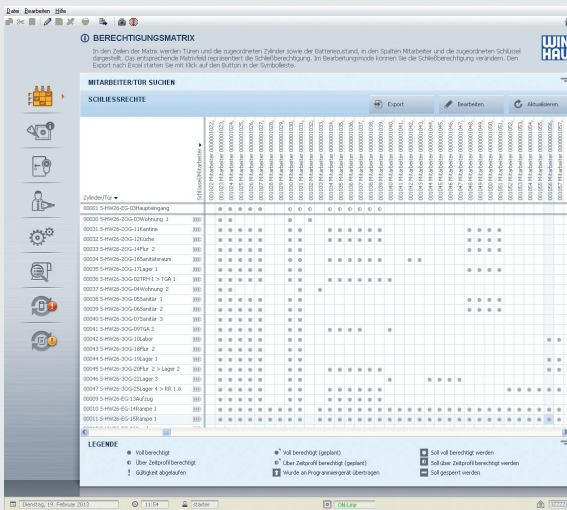

blueControl Start Virtual

Data sheet for administration software

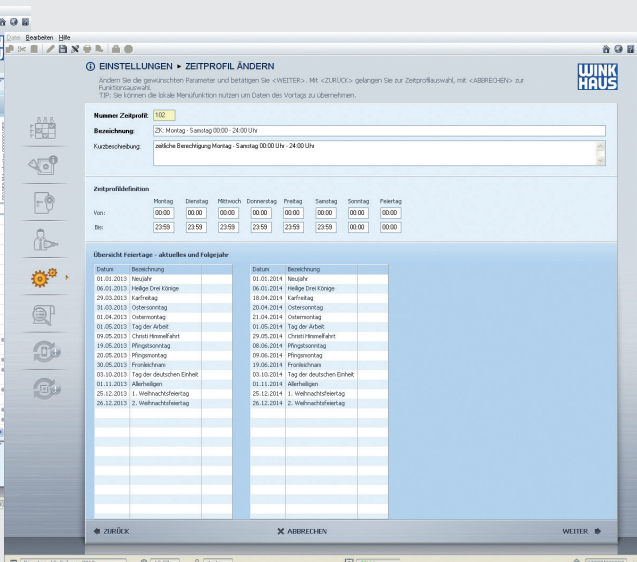

The user-friendly characteristics of blueControl Start Virtual are pretty much the same as those of the normal blueControl Start version.

Besides the software the package also includes a programming device. The latter, however, is only needed in special cases, such as battery replacement, thanks to the virtual network. Because in blueSmart systems programming details are directly sent to the online upload reader and thus to the keys. In this way it is no longer necessary to visit each single cylinder and program them.

Functions of blueControl Start Virtual

Granting authorisations directly from the matrix is a highly userfriendly way of administering locking rights.

You can choose from 18 time profiles for the cylinder and another 16 for the upload reader.

Attention: Programming device included. Upload readers as well as all installation material, such as power supply unit and means for data connection (e. g. COM server, interface converter) must be ordered separately.

Technical data

- + User guidance enabled by input wizard with optimised functions
- + Locking plan alterations are made via the authorisation matrix
- + 18 time profiles are available (incl. Office function)
- + Another 16 access time profiles for upload readers
- + Programming of authorisation modifications directly at the upload reader
- + Optionally extendable to up to 700 employees and 350 door components (item no. 5003380)
- + Automatic battery status message via the virtual network
- + Battery status of cylinders, double knob cylinders and EZK units are reported back via the virtual network
- + Event logging of all components with time stamp (optionally logging of events via the virtual network, item no. 4987418)
- + Can be upgraded to blueControl Professional
