

Experience new products for secure doo

Winkhaus exhibits at Sicherheitsexpo 2022 in Munich

Visitors to the Sicherheitsexpo 2022 can try out intelligent technology live at the Winkhaus stand. The traditional manufacturer of high-quality locking technology presents new and tried-and-tested solutions for electronic and mechanical access control.

Visitors to the stand can test the app and the smart blueCompact electronic access management system for themselves on a smartphone.

And anyone looking to discover the advantages of virtual networking in day-to-day operation of a locking system will find what they are looking for at Stand C11 in Hall 3: At the stand, Winkhaus will present live excerpts from the range of functions and demonstrate the speed of the virtual blueSmart network. This makes it possible to create a stable, robust, efficient and flexible access solution that lasts for many years. It is also worth taking a look at the extensive range of accessories. For example, the new design variants of the ETB-IM intelligent door handle will be available to see.

The focus is also on the 6-pin systems keyTec VSX and keyTec N-tra(+). While keyTec VSX demonstrates its capabilities as a durable all-rounder, including in apartment construction over several floors, the keyTec N-tra(+) reversible key system scores points with outstanding locking convenience and optional technical copying protection.
